By 2030, the city plans to reduce households primarily relying on traditional biomass for cooking to 0%. By the same year, Nakuru County aims to increase access to clean cooking to 100% of the population by taking these actions:

- **Establish a Clean Cooking Fund for Implementation of Projects**
- **Establish up to 3 Energy Centres to Train Clean Cooking Entrepreneurs**
- **At least 1 Clean Cooking Awareness Campaign Per Year**

**Nakuru County experiences an average of 56 days of the year without electricity due to power cuts. This is roughly equal to 5 days per month with no electricity.**

**By 2027, Nakuru County aims to increase access to electricity for households to 100% and increase energy efficiency with these actions:**

- **Retrofit all public buildings with energy efficient appliances to increase reliability of electricity supply**
- **Provide temporary subsidies in areas that have high electricity availability but low usage rates**
- **Map areas that are planned for grid extension in the next five years in liaison with Kenya Power and Lighting Company (KPLC)**
- **Promote uptake of solar home systems and solar lanterns**
- **Partner with solar PV companies to supply isolated and unelectrified communities with electricity**
- **Map areas that are planned for grid extension in the next five years in liaison with Kenya Power and Lighting Company (KPLC)**

**In 2021, 64% of the households in Nakuru County have access to electricity.**

- 61% have grid connected access
- 3% have solar systems and other off-grid solutions

**Nakuru County experiences an average of 56 days of the year without electricity due to power cuts. This is roughly equal to 5 days per month with no electricity.**
